

PeerStory: Mend

This PeerStory is a collection of quotes from a real user sharing their experience using Mend on PeerSpot.

Kieran Whelan

Principal Security
Engineer at Texthelp Ltd.

Use Case

Mend is a SaaS solution we use to make open source libraries for our products. It covers license usage, license type, and CVE vulnerabilities.

Valuable Features

Mend's integration with developer workflows is a massive part of our work. We use Visual Studio, and it integrates flawlessly with that. There is also a Chrome extension called Mend Advise that lets our team check libraries for vulnerabilities before they download and use them.

Results

It reduced the vulnerabilities in production by about 80 percent.

“The primary benefit is that we no longer download vulnerable libraries.”

“Our security posture is excellent because we can address the vulnerabilities Mend reports.”

When we have a release or run the script, it automatically picks up the vulnerabilities.

ROI

We can see a return on investments because we have no security breaches, security costs, or GDPR issues... The return on investment is having a secure product.
