Chief Technology Officer at FOSSAware

★★★★☆

Use Case

It is used to manage open-source associated risks. I'm a consultant, and I provide consultancy and management services in the domain of open-source risk management. I use this product as a part of the services to my customers.

Valuable Features

The dashboard view and the management view are most valuable.

Results

It also helps with post-production management because it gives alerts on new vulnerabilities.

> **"[Mend] is very stable."**

ROI

It saves a lot of money with early fixing. If you can figure out an open-source bug earlier, rather than in production, it can save a lot of, almost 100 times, cost.

> **"I have used their support, and they were excellent."**
